

CUTTING EDGE E-LEARNING DEVELOPMENT

Our goal is to inspire

Our goal is to inspire learners, subject matter experts and project managers

Every company is different, it has its own culture, its vision, custom processes, but also skillsets and knowledge that employees must gain. Therefore it seems apparent and logical that the motivation and engagement for employees is different from one organization to another.

Custom e-learning development

It seems obvious that the learning you provide for your employees should be tailor made for your organization, for your employees and for the motivation that drives them. **So, does your e-learning really engage and inspire your learners?**

Our final goal is simple, to help our clients prepare and develop the best e-learning experience for their organization. The one that will engage employees to gain new knowledge, to develop new skills and the most efficient e-learning experience possible. We want to fulfill learning gaps and maximize learning retention. How do we do it?

Our innovative instructional design process ensures that the learners engage and get their crucial knowledge without cognitive overload.

How do we do it?

Ensuring quality final products

Years of experience and step-by-step development process ensure hassle-free e-learning services and the final products customized to your needs and wishes.

1

1. Great collaboration with SME and state of the art Instruction design

Analysis and needs

We have to define the needs and goals of your e-learning and how e-learning can help you with employee's development. Together with your experts we define:

- > a detailed overview of target audience,
- > level of employees knowledge on the topic,
- > current skillsets and knowledge gaps employees might have,
- > we define the key learning objectives,
- > how difficult and extensive the content is,
- > is it practice oriented and skills based or mainly theoretical?

State-of-the-art instructional design

Our advanced instructional design process stripes the original content to the foundations and from there builds up new, completely customized e-learning content, which ensures maximum e-learning efficiency. We are tightly cooperating with your subject matter experts throughout the process, help them with fresh ideas and practical scenarios to minimize the cognitive overload.

2

2. Hi-tech development and quality guarantee

Cutting-edge technical solutions

We don't customize your content to suit our "chosen-one" technical solution, but rather the way around. For every project we choose the most appropriate technical solution, so you get the best result possible. We use cutting-edge technical solutions, but our team of technical experts ensures that it can be highly customized based on our final goal.

Implementation and quality control

We are with our clients all along the way of implementation phase. After the finalization of draft phase we choose a smaller group of employees, a so-called representation group and provide them with a pilot project, which ensures that the e-learning course will reach main learning goals.

The pilot analysis gives us a great overview of the learning process and results that will be gained within the company. If necessary, we make final adjustments and the e-course is ready to fulfill its mission.

We are using the most advanced technical solutions (AI, BigData, ...) for your e-learning product, which ensures that the final product looks good on any device.

3. On time & on budget

Project management and evaluation

Project management ensures that all the goals are met in the cost and timeframe. We use two phase evaluation process in cooperation with your SME, which ensures that we are always on a track to defined project goals.

Evaluation helps us detect potential errors in the process of making e-learning and consequently helps us to correct them along the way. Evaluation is not the final stage, but rather the ongoing process in the development of e-learning.

Our philosophy is straightforward. We always want to do our best and impress our clients. The deadlines are sacred to us and we always try to deliver before them.

Who are we?

More than 15 years of experience

More than 15 years of experience with top global companies, team of highly skilled professionals, from content editors, instructional designers, multimedia experts to technical engineers, guarantees that your final product will be top-notch. We believe that friendly and relaxed communication through project goes a long way and our cooperation should be creative and fun.

i We are located in the **heart of Europe**, in **one of the greenest countries in the world, called Slovenia**. If you'll find time to visit us, we'll be happy to show you around.
